

TWIN METALS ENVIRONMENTAL COMMITMENT

Twin Metals Minnesota is dedicated to protecting Minnesota's pristine wilderness, natural environment and recreational resources, and is committed to environmentally responsible mining practices in every aspect of mine construction and operation.

In addition to this strong environmental commitment, the Twin Metals project will face rigorous and thorough environmental review by multiple state and federal agencies and Native Tribes. To receive regulatory approval, the Twin Metals project must meet all state and federal environmental protection standards, which are among the most stringent in the world.

As the Twin Metals project moves forward, key state and federal regulatory agencies reviewing the project for compliance with environmental regulations and standards include:

- Minnesota Department of Natural Resources (DNR)
- Minnesota Pollution Control Agency
- U.S. Environmental Protection Agency
- U.S. Army Corps of Engineers
- U.S. Forest Service
- U.S. Bureau of Land Management

The environmental review and permitting processes also includes important formal consultation with Native Tribes to ensure all environmental issues are addressed and traditional cultural and historic properties are protected.

From construction to mine operation to reclamation, Twin Metals Minnesota is committed to world-class environmental performance and to ensuring that Minnesota's natural environment will be enjoyed for generations to come.
